Message from the Guest Editor

Cardiovascular disease is currently amongst the most common causes of morbidity and mortality in developed countries. Cardiovascular disease is a broad term that includes hypertension, coronary heart disease, cerebrovascular disease, peripheral vascular disease, heart failure, rheumatic heart disease, congenital heart disease, and cardiomyopathies. Heart failure is thus a highly prevalent condition with a devastating impact on patients' lives and with increasing health care costs. The aim of this Special Issue is to stimulate interest in developing discoveries and trends for either an early diagnosis or a more effective treatment for heart failure.
