Message from the Guest Editor

Knee osteoarthritis (OA) is a common disease caused by degeneration or trauma in joints that contributes to inflammation in the synovium, articular cartilage, and subchondral bone. Pathological changes are observed in knee OA, including synovitis, loss of extracellular matrix in the articular cartilage, chondrocyte death, tissue fibrosis, and cyst and osteophyte formation. Knee pain is a major symptom of OA that bothers people of all ages on a daily basis. There are also many other significant symptoms of knee OA, including swelling, stiffness, creaking joints, and difficulty in moving, which affect patients every day. The molecular mechanism of knee OA still needs to be explored further through clinical and preclinical studies. Determining how to identify, discover, and treat problems linked to knee OA are topics of concern and challenges for scientists around the world. Therefore, advances in molecular research in the pathology, prevention, diagnosis, and treatment of knee OA are within the scope of this Special Issue. Summaries of new findings, concepts, and molecular study directions in the form of review articles are also of interest in the Special Issue.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Biomedicines (ISSN 2227-9059) is an open access journal devoted to all aspects of research on human health and disease, the discovery and characterization of new therapeutic targets, therapeutic strategies, and research of naturally driven biomedicines, pharmaceuticals, and biopharmaceutical products. Topics include pathogenesis mechanisms of diseases, translational medical research, biomaterial in biomedical research, natural bioactive molecules, biologics, vaccines, gene therapies, cell-based therapies, targeted specific antibodies, recombinant therapeutic proteins, nanobiotechnology driven products, targeted therapy, bioimaging, biosensors, biomarkers, and biosimilars. The journal is open for publication of studies conducted at the basic science and preclinical research levels. We invite you to consider submitting your work to *Biomedicines*, be it original research, review articles, or developing Special Issues of current key topics.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within *Scopus*, *SCIE (Web of Science)*, *PubMed*, *PMC*, *CAPLus / SciFinder*, and other databases.

Journal Rank: JCR - Q2 (Pharmacology and Pharmacy) / CiteScore - Q1 (Medicine (miscellaneous))
