Message from the Guest Editor

Dear Colleagues,

We are pleased to announce a new Special Issue titled “Dentistry and Craniofacial District: The Role of Biomimetics—Second Edition”.

New technologies, such as digital devices, are available to enhance the effectiveness of diagnosis and treatment in dentistry and in the entire craniofacial district in the field of biomimetic design, constructions, devices, and operations.

The application of new biomaterials and techniques can lead to a significant advance in all the main dental branches, such as restorative dentistry, prosthodontics, oral surgery, implantology, pediatric dentistry, orthodontics, and temporomandibular disorder patients.

Authors conducting studies on these themes are welcome to submit original research articles, reviews, short communications, case series, and case reports to this Special Issue.

Dr. Nefeli Lagopati
Guest Editor
