Message from the Guest Editors

Chloride is the most abundant anion in animal cells and chloride channels have fundamental role in physiology and disease. Chloride channels are indeed involved in a variety of biological functions, including trans-epithelial fluid secretion, cell volume regulation, cellular signaling, and vesicular trafficking and acidification. Different types of chloride channels have been identified, and many of them are implicated in severe human diseases. For example, CFTR (a cAMP-dependent anion channel) and CLC-1 (a voltage-gated chloride channel), which are the first two human chloride channels that have been cloned, are involved, as causative genes, in cystic fibrosis and myotonia congenita, respectively. This Special Issue calls for original research, reviews, and perspectives that address the current knowledge in the field of chloride channels and transporters involved in human physiology and disease.

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
