Mitochondrial Disorders, UMR
1163, Institut Imagine, Université
de Paris, Paris, France

Deadline for manuscript
submissions:

15 November 2024

Message from the Guest Editors

The role of Ca²⁺ signaling in the context of cell function and cell survival is undoubtedly crucial and universally recognized. Indeed, variations in the intracellular Ca²⁺ level have been associated with a plethora of different stimuli and cellular responses, from fertilization to neuronal transmission to muscle contraction and endocrine secretion, just to name the most renowned. As a consequence, the dynamics of Ca²⁺ signaling need to be finely orchestrated and tightly regulated within the cell; any eventual alteration of Ca²⁺ homeostasis is likely to lead to the impairment of cell functions, impacting on cell survival and eventually conducting to cell and organ dysfunction. It is no surprise that the presence of a defective Ca²⁺ handling is a common hallmark of many human pathologies, including neurodegeneration, cardiac failure, diabetes, muscle dystrophies and cancer. In this light, the aim of this Special Issue is to provide new evidence and revise the published literature about the role of Ca²⁺ signaling, and the associated regulatory machinery, in the context of cell and tissue function both in physiological conditions as well as in stress, damage and disease conditions.

Message from the Editorial Board

Biomolecules is a multidisciplinary open-access journal that reports on all aspects of research related to biogenic substances, from small molecules to complex polymers. We invite manuscripts of high scientific quality that pertain to the diverse aspects relevant to organic molecules, irrespective of the biological question or methodology. We aim for a competent, fair peer review and rapid publication. Please look at some of the exciting work that has been published in *Biomolecules* so far. We would be delighted to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Biochemistry and Molecular Biology) / CiteScore - Q1 (Biochemistry)
