Message from the Guest Editors

Dear Colleagues,

A growing number of large-scale molecular epidemiologic studies has strongly suggested shared mechanisms and pathways between brain development and psychiatric disorders. There is now an appreciation of the growing roles of DNA polymorphism, rare genetic mutation, de novo mutation, tandem repeats and retrotransposon elements which profoundly affect genome integrity and stability. These genetic variants work synergically with environmental stress and thus change the trajectory of neurodevelopment which may co-segregate with a range of psychiatric disorders.

In this Special Issue, we would like to provide a panoramic view of ongoing research covering new advances in genetic variants and molecular networks underpinning neurodevelopmental and psychiatric disorders. An interplay between neurodevelopment and mental health is preferred but not essential. We encourage a wide range of submissions including original articles, review papers, innovative research methods, etc.

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
