### Message from the Guest Editors

Dear Colleagues,

A better characterization of central nervous system (CNS) tissue damage in pathological conditions can be obtained integrating information arising from several imaging techniques. The visualization of structures with different contrast, resolutions, and 3D stacks of images enriches our understanding of diseases in the CNS. Moreover, interesting improvements can be achieved by combining different imaging techniques. This Special Issue of *Brain Sciences* aims to present a collection of studies detailing the most recent advancements in neuroimaging multimodal approaches, including magnetic resonance imaging (MRI), microscopy techniques, or X-ray techniques, among others, as well as recent developments in new algorithms for integrating imaging modalities and data analysis.

## Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, CAPlus / SciFinder, and other databases.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
