Message from the Guest Editor

Dear Colleagues,

As established in adult musicians, music training and expertise can facilitate various brain functions and even have their markers in the brain structures. However, the neuroplastic promises of music to facilitate music-related or music-unrelated perceptual and cognitive functions in school-aged children are not yet adequately documented. In parallel, various projects are currently underway in order to find out the means in which musical practices such as singing, playing, and listening might facilitate the recovery in neurological and psychiatric disorders. The current special issue aims at introducing recent findings in these topics which carry both scientific and societal impact.

Dr. Mari Tervaniemi

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Brain Sciences* (ISSN 2076-3425). *Brain Sciences* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on neuroscience. The scientific community and the general public can access the content free of charge as soon as it is published.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PSYINDEX, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.9 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2024).
