

## **New Technology of Green Intelligent Construction and Risk Assessment in Architectural Structures**

Guest Editors:

**Dr. Bo Huang**

School of Civil Engineering,  
Chongqing Jiaotong University,  
Chongqing 400074, China

**Prof. Dr. Xiaolu Cui**

School of Electromechanical and  
Vehicle Engineering, Chongqing  
Jiaotong University, Chongqing  
400074, China

Deadline for manuscript  
submissions:

**31 January 2025**

### **Message from the Guest Editors**

With the advancement of computer technology and the social economy, the progress that has been made in digital, intelligent, and information technology offers boundless possibilities for shaping future green structures. It also presents a new direction for implementing disaster prevention and reduction measures in extreme events.

The objective of this Special Issue is to promote and present recent advancements in artificial intelligence, green and low-carbon technologies, disaster prevention and mitigation, as well as sustainable development in the field of engineering structures.

## Editor-in-Chief

### Prof. Dr. David Arditi

Construction Engineering and Management Program,  
Department of Civil,  
Architectural, and Environmental  
Engineering, Illinois Institute of  
Technology, 3201 South  
Dearborn Street, Chicago, IL  
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
