

## Novel Trends in Urban Planning for Building Urban Resilience

Guest Editors:

**Prof. Dr. Steffen Lehmann**

Urban Futures Laboratory,  
School of Architecture, The  
University of Nevada, Las Vegas,  
NV 89154, USA

**Dr. Monika Szopinska-Mularz**

Department of Architectural  
Design and Engineering Graphics,  
Faculty of Civil and  
Environmental Engineering and  
Architecture, Rzeszow University  
of Technology, Poznanska 2, 35-  
084 Rzeszow, Poland

Deadline for manuscript  
submissions:

**closed (29 February 2024)**

### Message from the Guest Editors

**This Special Issue aims to provide an overview of existing knowledge on novel trends in urban planning for building social, economic, and environmental resilience in cities of various scales and densities.** Original research (experimental and theoretical), case studies, and comprehensive review papers are invited for submission. Relevant papers include urban planning solutions, actions, and future-oriented scenarios focused on enhancing urban resilience through:

- Governance and multilevel collaborations to confront future disruptions;
- Strengthening community resilience;
- Developing optimal compactness, density, and mixed land use;
- Innovative technologies and digitalisation in urban planning for a better urban life;
- Regenerative urban design for climate change mitigation, adaptation, and health;
- Nature-based solutions and biodiversity improvement for increasing resilience against climate change, extreme weather events, and disease transmission;
- Urban–rural interlinkages in urban planning and decision-making practices;
- Strategies and guidance to reduce adverse impacts of past planning decisions.

## Editor-in-Chief

### Prof. Dr. David Arditi

Construction Engineering and Management Program,  
Department of Civil,  
Architectural, and Environmental  
Engineering, Illinois Institute of  
Technology, 3201 South  
Dearborn Street, Chicago, IL  
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
