

Building Foundation Analysis: Soil–Structure Interaction

Guest Editors:

Prof. Dr. Qiang Xie

School of Civil Engineering,
Chongqing University, Chongqing
400044, China

Dr. Yuxin Ban

School of Civil Engineering and
Architecture, Chongqing
University of Science and
Technology, Chongqing 401331,
China

Dr. Xiang Fu

College of River and Ocean
Engineering, Chongqing Jiaotong
University, Chongqing 400074,
China

Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editors

Dear Colleagues,

This Special Issue aims to provide readers with insights into the latest research findings, engineering practices, and technological innovations in the field of soil–structure interaction.

1. Fundamental principles and theories of soil mechanics.
2. Design and analysis methods for building foundations.
3. Models and numerical simulations of soil-structure interaction.
4. Influence of different soil types on building behaviour.
5. Analysis of soil bearing capacity, settlement, and deformation.
6. Dynamic response and seismic engineering of soil-structure systems.
7. Design, analysis, and construction techniques for pile foundations.
8. Application of soil improvement techniques in soil-structure interaction.
9. Effects of soil lateral forces on buildings and mitigation methods

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
