

The Impact of Engineering Practices on a Sustainable Built Environment

Guest Editors:

Prof. Dr. Vian Ahmed

Department of Industrial Engineering, College of Engineering, American University of Sharjah, Sharjah 26666, United Arab Emirates

Dr. Anupa Manewa

School of Civil Engineering and Built Environment, Liverpool John Moores University, Liverpool, UK

Dr. Sara Saboor

Department of Industrial Engineering, American University of Sharjah, Sharjah P.O. Box 26666, United Arab Emirates

Deadline for manuscript submissions:

closed (29 February 2024)

Message from the Guest Editors

In view of the global challenges that the world is currently facing, to save and protect our planet, creating smart and sustainable built and human environments is crucial and requires a multi-disciplinary approach that addresses the complex interactions between the built environment, natural systems, and human activities. We therefore invite you to submit to this Special Issue research papers that address critical issues; challenges that provoke solutions for smarter and more sustainable built and human environments; and strategies that promote environmental, social, and economic sustainability, under the following themes:

- **Smart and sustainable building**
- **Circular economy in the built environment**
- **Smart and sustainable transportation**
- **Green infrastructure**
- **Sustainable urban planning**
- **Resilient infrastructure**
- **Smart city technologies**
- **Human behavior and sustainability**

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
