Deadline for manuscript  
submissions:

**10 February 2025**

### Message from the Guest Editor

Dear Colleagues,

Climate change is the greatest environmental challenge of our time. A major source of this challenge is the buildings and construction sector, which represents an estimated 37% of global operational energy use and process-related carbon emissions. This Special Issue calls on topics of interest include, but are not limited to:

- Energy efficient and net zero carbon emissions focused planning, design, construction, operation, maintenance, renovation, and demolition of buildings
- Energy and carbon management and mitigation in buildings and construction
- Digital solutions to save energy and carbon in buildings and construction
- Assessing, monitoring, and reducing energy demand and consumption, and the carbon emissions of buildings and construction
- In-use energy consumption estimating, monitoring, and reduction
- Building energy modeling and simulation
- Carbon offsetting
- Energy efficient and net zero carbon building materials
- Building energy efficiency and net zero carbon policies and frameworks
- Occupant behavior, comfort, health, wellbeing, and quality of life
- Economic, environmental, and social impacts in

Journal by MDPI

### Editor-in-Chief

**Prof. Dr. David Arditi**  
Construction Engineering and Management Program,  
Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

### Author Benefits

**Open Access:** free for readers, with the potential for increased visibility and citations for their institutions.

**High Visibility:** indexed with other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (*Architecture*)

### Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovation and technology can bring dramatic improvements to design, planning, and policy as critical in developing the cities and buildings of the future.
