submissions:

31 October 2024

Message from the Guest Editors

Dear Colleagues,

Despite being a fundamental part of transportation infrastructures, road pavements face ongoing challenges related to durability, sustainability, and performance under varying environmental conditions. This Special Issue seeks to address these challenges by showcasing innovative research and technological advancements in road pavements science and engineering.

We invite original contributions describing new research, case studies, projects, reviews and state-of-the-art discussions on the following and related topics:

- Advancements in pavement design;
- Novel construction methods and materials;
- Pavement-related safety issues;
- Innovative surface treatments;
- Pavement behavior modelling and simulation;
- New mobility challenges in urban pavement design;
- Pavement surface characteristics and ride quality;
- Sustainable approaches in pavement design;
- Pavement monitoring methods;
- New maintenance and rehabilitation techniques and technologies.

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
