Deadline for manuscript  
submissions:

**closed (31 May 2023)**

### Message from the Guest Editors

This Special Issue welcomes high-quality original research papers, which describe the most significant research in solid waste recycling, the application of green building materials, and the economic construction industry. Potential topics include, but are not limited to, the following:

- Sustainable or green materials for construction;
- Energy-saving, economic, and carbon reduction of construction technology;
- Integrated technique for construction materials, repair, and renovation in sustainable construction;
- Recycling raw materials (construction and demolition waste, industrial waste) in building materials production;
- Case studies in sustainable or green construction materials and technology.

Professor Liu warmly invites authors to submit their original papers for potential inclusion in this Special Issue on Application of Green Materials and Technology in the Construction Industry.

## Editor-in-Chief

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
