Metrology for Living Environment

Guest Editors:

Dr. Stefano Laureti

Department of Informatics, Modeling, Electronics and System Engineering, The University of Calabria, 87036 Rende, CS, Italy

Dr. Sara Casaccia

Department of Industrial Engineering and Mathematical Sciences, Marche Polytechnic University, 60121 Ancona, Italy

Dr. Michal Švantner

New Technologies - Research Centre, University of West Bohemia, Plzen, Czech Republic

Deadline for manuscript submissions: closed (30 June 2023)

Message from the Guest Editors

This Special Issue welcomes papers presenting innovative metrology techniques for designing, constructing, and operating an efficient, safe, comfortable, and healthy built environment, including active and assisted living (AAL). Innovative solutions can be based on the IoT paradigm, BIM, sensors and sensor networks, cutting-edge signal and image processing techniques, structural health monitoring (SHM) techniques, data analytics, artificial intelligence, and interoperability standards.

This Special Issue has been organized in collaboration with the IEEE International Workshop on Metrology for Living Environments, which covers all aspects of the living environment, focusing on design and life cycles, energy efficiency, SHM, comfort assessment, indoor pollution, chemical and physical parameter monitoring, and human health monitoring.

For scholars interested to submit papers to the Special Issue, please click "Submit to Special Issue" or contact Astoria Yao: astoria.yao@mdpi.com.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance. interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank: JCR - Q2 (Engineering, Civil) / CiteScore - Q1 (Architecture)
