

## The Disposal and Recycling of Construction and Demolition Wastes

Guest Editors:

**Dr. Tao Meng**

College of Civil Engineering and  
Architecture, Zhejiang University,  
Hangzhou, China

**Prof. Dr. Jiabin Li**

Department of Civil Engineering,  
KU Leuven, Campus Bruges, 8200  
Bruges, Belgium

**Prof. Dr. Deyu Kong**

College of Civil Engineering,  
Zhejiang University of  
Technology, Hangzhou, China

Deadline for manuscript  
submissions:

**closed (10 July 2022)**

### Message from the Guest Editors

*Buildings* (ISSN 2075-5309, IF 2.648, Q2) is currently running a Special Issue entitled “The Disposal and Recycling of Construction and Demolition Wastes”.

The main purpose of this Special Issue is to exchange the recent studies on how to dispose of and recycle wastes in construction and demolition, including construction waste, demolition waste, decoration waste, excavated soil, and engineering slurry. We truly expect to strengthen the efficient and high-valuable utilization of these wastes around the world.

This issue will be open for submission soon. The official submission deadline is 10 July 2022. Detailed information can be found at:

[https://www.mdpi.com/journal/buildings/special\\_issues/recycle\\_](https://www.mdpi.com/journal/buildings/special_issues/recycle_)  
Please feel free to contact me with any concerns you may have about this Special Issue.

## Editor-in-Chief

### Prof. Dr. David Arditi

Construction Engineering and Management Program,  
Department of Civil,  
Architectural, and Environmental  
Engineering, Illinois Institute of  
Technology, 3201 South  
Dearborn Street, Chicago, IL  
60616, USA

## Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Engineering, Civil*) / CiteScore - Q1 (Architecture)
