

Special Issue

Thermal Comfort in Built Environment: Challenges and Research Trends

Message from the Guest Editors

Future development of human thermal comfort research will mostly take two paths: one is the thorough scientific understanding of the complex relationship between people and their surrounding thermal environment, not just for human comfort needs, but also with an emphasis on the implications for health; the second is the potential for technical improvement brought on by these fresh scientific discoveries, which has the potential to increase individual thermal comfort while also lowering the amount of energy needed to sustain thermal conditions in buildings. Topics covered in this Special Issue include but are not limited to thermal comfort, health, personal comfort system, thermal environment and building energy performance. This Special Issue welcomes excellent original contributions and high-impact works, with the goal of thermal comfort research in special spaces, special populations, and special equipment. About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) /
CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
