Advancements in Cementitious Materials: Exploring the Latest Trends and Future Outlook

Message from the Guest Editor

We are pleased to announce the Special Issue "Advancements in Cementitious Materials: Exploring the Latest Trends and Future Outlook" in our journal. This issue focuses on the latest developments in cement-concrete composites technology and the production, use, and performance of cement-based construction materials. We welcome innovative research papers, case studies, and review articles covering various aspects such as cement, concrete reinforcement, additives, corrosion technology, and more. This journal provides vital information to optimize efficiency, productivity, and competitiveness in the global market. We encourage all professionals and academics involved in building materials research or specification to read and contribute. More examples of Special Issues of Buildings at:

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi

Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Civil) / CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2024).
