Special Issue

High-Performance Concrete Structures for Disaster Prevention

Message from the Guest Editors

Reinforced concrete has been widely used all over the world as a building material. However, due to the dissymmetry of concrete tension and compression, concrete structures are subjected to cracking damage under earthquakes and other extreme loads. Furthermore, rebar fracture may cause instability of the structures. For this Special Issue, we are seeking submissions of original research articles on one or more of, but not limited to, the following topics:

- advanced concrete technologies for enhancing the performances of and preventing catastrophic consequences in existing reinforced concrete structures under extreme loads;
- capacity assessment or failure process simulation methods for existing or next-generation reinforced concrete structures;
- experimental studies for high-toughness concrete structures;
- hysteretic behavior models for high-performance reinforced concrete structures;
- damage identification and performance evaluation methods for reinforced concrete structures.

Guest Editors

Dr. Hongmei Zhang

College of Civil Engineering and Architecture, Zhejiang University, Hangzhou, China

Dr. Giuseppe Quaranta

Department of Structural and Geotechnical Engineering, Faculty of Civil and Industrial Engineering, Sapienza University of Rome, 00184 Rome, Italy

Deadline for manuscript submissions

closed (20 December 2023)

About the Journal

Message from the Editor-in-Chief

Current urban environments are home to multi-modal transit systems, extensive energy grids, a building stock, and integrated services. Sprawling neighborhoods are composed of buildings that accommodate living and working quarters. However, it is expected that the cities and communities of the future will face complex and enormous challenges, including maintenance, interconnectivity, resilience, energy efficiency, and sustainability issues, to name but a few. A smart city uses advanced technologies and a digital infrastructure to improve the outcomes in every aspect of a city's operations. A smart building optimizes the experience of occupants, staff, and management by using a modern and connected environment. Innovations in technology that can bring dramatic improvements to design, planning, and policy are critical in developing the cities and buildings of the future.

Editor-in-Chief

Prof. Dr. David Arditi
Construction Engineering and Management Program, Department of Civil, Architectural, and Environmental Engineering, Illinois Institute of Technology, 3201 South Dearborn Street, Chicago, IL 60616, USA

Author Benefits

High Visibility:

indexed within SCIE (Web of Science), Scopus, Ei Compendex, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Construction and Building Technology) / CiteScore - Q1 (Architecture)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15.1 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the second half of 2025).
