### Message from the Guest Editor

This Special Issue, entitled “Advances in the Use of PET/CT and MRI in Prostate Cancer”, will focus on the role of the most recent advancements in PET/CT and MRI in the management of patients affected by prostate cancer, for initial staging and restaging purposes. Moreover, the advanced analysis of PET/CT and MRI using radiomics enables the extraction of otherwise concealed information from images, potentially useful for therapeutic and diagnostic management. Finally, PET/CT may act as guidance to provide indications for therapy with novel receptor-targeted radiopharmaceuticals and to assess its effectiveness.
