This Special Issue, entitled “Advances in the Use of PET/CT and MRI in Prostate Cancer”, will focus on the role of the most recent advancements in PET/CT and MRI in the management of patients affected by prostate cancer, for initial staging and restaging purposes. Moreover, the advanced analysis of PET/CT and MRI using radiomics enables the extraction of otherwise concealed information from images, potentially useful for therapeutic and diagnostic management. Finally, PET/CT may act as guidance to provide indications for therapy with novel receptor-targeted radiopharmaceuticals and to assess its effectiveness.

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.
