Message from the Guest Editor

Dear Colleagues,

Hormone-receptor-positive and HER2-negative breast cancer is the most common type of breast cancer. Endocrine therapy is the mainstay of treatment, and many patients do not need any other treatment. In both advanced and early cancer, additional therapies aiming at overcoming resistance have been developed. The emergence of novel targeted therapy in combination with endocrine therapy has shown improvement in outcomes, and may even make cytotoxic chemotherapy unnecessary in more patients in the future. In particular, CDK4/6 inhibitors and novel SERDs are promising options for the future. In this Special Issue of *Cancers*, we welcome original research and comprehensive review articles focusing on recent developments in the treatment of hormone-receptor-positive breast cancer, including special topics such as premenopausal patients and neoadjuvant treatment approaches.

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
