Message from the Guest Editors

Dear Colleagues,

This Special Issue in *Cancers* aims to present the current achievements of scientific investigations focusing on Hippo signaling, with emphasis on oncogenesis, cancer progression, metastasis, cancer therapy resistance, and the development of targeted anticancer agents based on Hippo signaling. The topic is of particular importance because the dysregulation of Hippo signaling occurs in many types of human cancer and contributes to cancer development, progression, metastasis, and therapeutic resistance. Recent advances in methods and technologies of cell biology, molecular biology, immunology, and biochemistry have enabled fast growth in this area. This Special Issue aims to present the most important recent achievements in this unique field of cancer research.

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
