Message from the Guest Editor

Dear Colleagues,

Malignant bone tumors require intensive treatments, including chemotherapy, surgical tumor excision, and radiation therapy. Although limb-salvage surgery is standard treatment for malignant bone tumors, there remains various problems such as limited options of anticancer agents, postoperative surgical site infections, breakage of tumor prosthesis, and fracture of transplanted bone. To improve oncological and functional outcomes of malignant bone tumors, improvement of diagnostic method, selection of appropriate anticancer drugs, development of new anticancer drugs, improvement of surgical techniques and implants, are demanded. This Special Issue of Cancers aims to bring together the highest quality original/review articles on clinical research for malignant bone tumors.

Message from the Editor-in-Chief

Cancers is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
