Message from the Guest Editor

Dear Colleagues,

Unbalanced nursing signals from the stromal microenvironment to cells affected by genetic and epigenetic alterations with neoplastic potential are known to be crucial hallmarks of the very large majority of solid cancer types. Emerging recent evidence indicates that, also in circulating neoplastic diseases such as chronic and acute leukemias, an altered cross-talk between microenvironment niches in the bone marrow and some other hematopoietic reservoirs may be needed to support the expansion of early neoplastic clones. These findings might have profound implications for the diagnosis and treatment of leukemias, and are opening new fields for basic, translational and clinical studies. This Special Issue of *Cancers* offers a discussion platform for scientists and clinicians interested in this emerging topic.

We are looking forward to receiving your contributions.

Dr. Francesco Bertolini

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
