submissions:

**31 December 2024**

### Message from the Guest Editors

Dear Colleagues,

The skin is the largest human organ which is directly exposed to the environment and chemical carcinogens. These include natural products, skin care products and environmental pollutants. While sunlight is not a chemical carcinogen in itself, it can induce the generation and formation of several carcinogenic chemical intermediates through photosensitization. Such intermediates include melanin metabolites and metabolic intermediates of sunscreens or skin care products. Chemical carcinogens often induce skin inflammation, leading to immunomodulation, mutations and skin cancer initiation.

This Special Issue will focus on such unexplored carcinogens and their mode of actions in inducing skin cancer initiation.

## Message from the Editor-in-Chief

*Cancers* is an international online journal addressing both clinical and basic science issues related to cancer research. The journal is publishing in Open Access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

**Journal Rank:** JCR - Q1 (Oncology) / CiteScore - Q1 (Oncology)
