Colorectal cancer is one of the most frequent cancer entities in humans. The scientific community has made significant progress in our molecular understanding of colorectal carcinogenesis, of hereditary as well as sporadic colorectal cancer types, this pertaining to the discovery of, e.g., (mutated) oncogenes and tumor suppressor genes, microsatellite instabilities, modifications in DNA repair, cellular aging, signaling cascades; genomic, epigenetic, transcriptional, translational, and protein modifications; as well as microbiotic factors and further parameters
