

## Special Issue

# PET/CT and Conventional Imaging in Cancers

### Message from the Guest Editors

Conventional imaging (such as CT or MR) has played a central role for many years. And the role of PET/CT for the evaluation of a high number of diseases has emerged, in particular for neoplastic conditions. The aim of this Special Issue is to analyze the difference between conventional imaging and PET/CT for the assessment of neoplastic disease, also putting attention on the pros and cons of each technique and making a comparison between them.

## About the Journal

### Message from the Editor-in-Chief

*Cancers* (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.
