Sarcomas of Extra-Mesenchymal Sites

Message from the Guest Editor

In this Special Issue, we provide an essential update on sarcomas arising in extra-mesenchymal sites of viscera as well as head and neck. Sarcomas are both rare and highly diverse, with more than 75 sarcoma types described in the W.H.O. Soft Tissue and Bone Tumours 5th edition fascicle. Accurate diagnosis can be challenging, as tumors may overlap in clinical presentation, imaging appearance and histologic features, and molecular genetic evaluation may be required to determine the specific diagnosis. While most sarcomas arise in mesenchymal tissue such as dermis, fat, muscle and bone, a subset originate in viscera and head and neck, and a few occur exclusively in extra-mesenchymal sites. In the setting of ongoing refinements in sarcoma diagnosis, prognostication and treatment, this review summarizes key features of extra-mesenchymal sarcomas: the epidemiology of these tumors, the diagnostic pathology and molecular genetics of specific entities, clinical presentation range, imaging characteristics and current and upcoming treatment approaches.

About the Journal

Message from the Editor-in-Chief

Cancers (ISSN 2072-6694) is an international, online journal addressing both clinical and basic science issues related to cancer research. The journal will continue its open access format, which will certainly evolve to ensure that the journal takes full advantage of the rapidly changing world of information and knowledge dissemination. It publishes high-quality clinical, translational, and basic science research on cancer prevention, initiation, progression, and treatment, as well as other related topics, particularly to capture the most seminal studies in the rapidly growing area of immunology, immunotherapy, and tumor microenvironment.

Editor-in-Chief

Prof. Dr. Samuel C. Mok

Department of Gynecologic Oncology and Reproductive Medicine, The University of Texas MD Anderson Cancer Center, Houston, TX 77030, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Oncology) / CiteScore - Q1 (Oncology)
