

Special Issue

Functional Carbon Materials and Applications

Message from the Guest Editor

Since their discovery in the last decades of 20th century, the scientific impact of sp² carbon nanomaterials, composed of zero dimensional (0D) fullerenes, 1D carbon nanotubes (CNTs), 2D graphene, and their derivatives has seen enormously growth. By operating in a multidisciplinary context, the superior physical and chemical properties of such nanostructures have been widely explored for applications in different fields, from chemistry, physics and engineering to biology and medicine. A large number of studies have been conducted for developing suitable functionalization processes to overcome some drawbacks and confer favourable functional to carbon nanostructures, mainly in engineering and biomedicine. These synthetic strategies employ both low and high molecular weight molecules to be linked by either covalent or non-covalent bonds. The main aim of this special issue is to present the most relevant and recent insights in the field of functional carbon materials, coupling the synthetic and the application features that underpin the choices made when seeking a specific functionalization route for a defined application. About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Craig E. Banks
Faculty of Science and Engineering, Manchester Metropolitan
University, Chester Street, Manchester M1 5GD, UK

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, CAPlus /
SciFinder, and other databases.

Journal Rank:

CiteScore - Q2 (Environmental Science (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 22.5 days after
submission; acceptance to publication is undertaken in 2.8
days (median values for papers published in this journal in
the second half of 2025).
