Message from the Guest Editors

This Special Issue invites contributions of original high-quality interdisciplinary research papers devoted to currently important topics in catalysis and related subjects. Studies significantly advancing our fundamental understanding of and focusing on the **Catalytic Purification of Pollutants and Catalytic Conversion of Solid Wastes** will be given primary consideration. Field studies have preference, while papers describing laboratory experiments must demonstrate significant advances in methodology or mechanistic understanding with a clear connection to the catalytic pathway and catalysis chemistry. Descriptive, repetitive, incremental, or regional-scale studies with limited novelty will not be considered.
