Deadline for manuscript  
submissions:

**closed (20 October 2022)**

### Message from the Guest Editors

Organic wastes are an important category of hazardous wastes. Some organic wastes are toxic, persistent, and difficult to degrade, so they are very harmful to the environment and humans. Effective catalytic treatment of organic waste can reduce environmental pollution and even turn waste into treasure. *Catalysts* (ISSN 2073-4344) is an international open access journal of catalysis and catalyzed reactions. This Special Issue of *Catalysts* on “Catalysis in Treatment and Utilization of Organic Waste” invites papers dealing with emerging topics in environmental chemical and process engineering, including pollution control, separation processes, advanced oxidation processes, resources recovery, waste-to-energy, environmental nanotechnology, and utilization. Papers should describe their experimental and theoretical results in as much detail as possible so that they can be reproduced.
