Message from the Guest Editor

This is the second edition of the Special Issue titled “Advances in Green Catalysis for Sustainable Organic Synthesis”. Catalysis is one of the most powerful tools in organic synthesis and one of the pillars of green chemistry. The integration of catalysis in organic reactions has created a new way of thinking in sustainable organic synthesis.

At present, the challenges are the design and use of green catalysts and catalyzed reactions to foster sustainable synthesis.

The present Special Issue intends to highlight updated contributions in the design, synthesis, and application of green catalysts and green catalytic methods that pave the way for a sustainable organic synthesis. Review articles by experts in the field will also be welcome.
