### Message from the Guest Editors

In this Special Issue, we welcome research efforts in the field of catalytic biomass valorization for liquid fuel production, aiming at offering a platform for high-quality publications. More precisely, we invite research and review articles dealing with the development of processes for producing liquid biofuels (e.g., gas-to-liquid (GTL), biomass-to-liquid (BTL), Fischer–Tropsch liquid (FTL) technologies) as well as with the development of solid catalysts for these processes for the production of liquid biofuels, such as biodiesel, renewable (green) diesel, green kerosene (aviation fuel), green gasoline, bioethanol, biomethanol, biobutanol, etc.

Deadline for manuscript  
submissions:

**closed (30 June 2022)**
