# Catalytic Upgrading of Biomass-derived Streams Towards Fuels and Chemicals

Guest Editors:

#### Prof. Dr. Javier Bilbao Elorriaga

Dept Chem Engn, Univ Basque Country, POB 644, 48080 Bilba, Spain

### Dr. Idoia Hita Del Olmo

King Abdullah University of Science and Technology (KAUST), Thuwal, Saudi Arabia

#### Dr. Peter J. Deuss

Chemical Engineering (ENTEG), University of Groningen, Nijenborgh 4, NL-9747 AG Groningen, The Netherlands

Deadline for manuscript submissions: closed (31 December 2020)

## Message from the Guest Editors

This Special Issue intends to cover different innovative catalytic routes (both homogeneous and heterogeneous) for the valorization of lignocellulosic biomass-derived streams aiming for the production of renewable biofuels and biochemicals. The aspects reported on the papers might include (but are not restricted to): new catalytic processes, novel catalyst development, innovative reactor design, kinetic modeling, catalyst deactivation, intergration of bioderivates in refinery units, novel analytic techniques for feed and product analysis, biomass pretreatments, etc.
