University Medical Center  
Groningen, Department of  
Pathology and Medical Biology,  
Experimental Pulmonology and  
Inflammation Research,  
University of Groningen, 9713 GZ  
Groningen, The Netherlands

Deadline for manuscript  
submissions:

**20 October 2024**

### Message from the Guest Editor

There is a growing list of molecules that can act as DAMPs, but they all have two things in common: 1) they are released into the extracellular space upon cellular damage and cell death, and 2) they can trigger a pro-inflammatory response by activation of pattern recognition receptors (PRRs). DAMPs can be derived from various sub-cellular origins, like the mitochondrion, the cytoplasm, the nucleus, the cytoskeleton or even the extracellular matrix. Furthermore, DAMPs can bind to and activate a plethora of PRRs, including Toll-like receptors (TLRs), the receptor for advanced glycation end-products (RAGE) or purinergic receptors.

The goal of this Special Issue is to gather evidence for the various roles of DAMPs and their receptors in the pathophysiology of COPD. Which DAMPs are associated with emphysema, or chronic bronchitis? Which DAMPs are related to the development of exacerbations? Does the remodeled and damaged extracellular matrix in COPD patients lead to the increased release of ECM-DAMPs? And can we use specific inhibitors for DAMPs or their receptors as treatment for COPD patients? These are all questions that could be addressed in this Special Issue of *Cells*.

## Editors-in-Chief

### **Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
