### **Dr. Carlos A. Flores**

Centro de Estudios Científicos  
and Universidad San Sebastián,  
Valdivia, Chile

Deadline for manuscript  
submissions:

**closed (31 July 2023)**

### **Message from the Guest Editors**

Dear Colleagues,

The airway epithelium provides more than just a physical barrier that protects the body from inhaled pathogens. Airway epithelial cells are crucial for actively maintaining airway surface liquid homeostasis, mucociliary transport, antigen processing, and pathogen sensing. A better understanding of the myriad roles played by airway epithelial cells has been accelerated in recent years by the identification of distinct epithelial cell populations that constitute, and are resident in, the human airways, primarily driven by advances in single-cell RNA sequencing. This information has also been crucial in defining epithelial cell lineage and differentiation, as well as identifying rarer epithelial cells.

The purpose of this Special Issue is to highlight the important role played by distinct types of airway epithelial cells, and how this information is being harnessed to develop new therapeutic strategies for important diseases such as cystic fibrosis, COVID-19, asthma, and pulmonary fibrosis. The goal of this Issue is to provide a broad scope that includes research papers and reviews related to the functional roles of epithelial cells in airway health and disease.

## Editors-in-Chief

**Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

**Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
