submissions:
closed (15 March 2024)

Message from the Guest Editor

Dear Colleagues,

Given the global epidemic of obesity, there is increasing interest in adipose tissue and adipocyte biology. Three types of adipocytes, i.e., white, brown and beige/brite, play key roles in energy homeostasis. This Special Issue focuses on the cellular biology aspect of adipose progenitor cells and adipocytes subpopulations, as well as on adipose tissue microenvironment, aims to unravel novel molecular mechanisms underlying adipocyte functions.

We welcome reviews, original research articles, communications, and perspective articles on all aspects related to the molecular and cellular mechanisms of adipose tissue and adipocytes in health and disease.

We look forward to receiving your manuscripts.

Dr. Christian Dani

Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
