From Mechanisms to Therapeutics: Wnt Signaling in Cancer

Guest Editors:

Dr. Anitha K. Shenoy

Department of Pharmaceutical and Biomedical Sciences, College of Pharmacy, California Health Sciences University, Clovis, California, USA

Dr. Liya Pi

Department of Pathology and Laboratory Medicine, Tulane University, New Orleans, LA 70112, USA

Deadline for manuscript submissions:

closed (31 August 2023)

Message from the Guest Editors

Dear Colleagues,

Wnt Signaling pathway plays a central role in human development, tissue homeostasis, and a plethora of diseases including cancer. It is well-recognized that the canonical, as well as non-canonical Wnt signaling pathways, are closely associated with tumor initiation, progression, and metastasis. The canonical Wnt signaling also regulates the formation and maintenance of embryonic, adult, and cancer stem cells. In addition, there exists a complex relationship between Wnt signaling and the tumor microenvironment that promotes cancer cell proliferation. As a result, the Wnt signaling pathway and its components have become attractive drug targets for cancer treatment.

In this regard, we welcome original articles and reviews for this special issue. The subtopics may include but are not limited to:

1. Wnt signaling in tumorigenesis and development of cancer;
2. Targeting Wnt signaling in cancer;
3. Wnt signaling and Drug resistance in cancer;
4. Wnt signaling and the tumor microenvironment;
5. Wnt signaling and Cancer Stem Cells;
6. Strategies to employ Wnt signaling pathway modulators in cancer treatment.

Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
