Metabolic Hallmarks in Cancer

Guest Editors:

Dr. Michael Lisanti

Translational Medicine, School of Science, Engineering and the Environment (SEE), University of Salford, Greater Manchester, Salford M5 4WT, UK

Dr. Ubaldo Martinez-Outshoorn

Department of Medical Oncology, Sidney Kimmel Cancer Center, Thomas Jefferson University, Philadelphia, PA 19107, USA

Dr. Marta Mauro-Lizcano

Translational Medicine, School of Science, Engineering and the Environment (SEE), University of Salford, Greater Manchester, Salford M5 4WT, UK

Deadline for manuscript submissions:

20 May 2025

Message from the Guest Editors

Cancer is a complex disease that disrupts the delicate balance of cellular processes, with metabolic reprogramming being a central hallmark. This reprogramming is a result of the intricate interplay between cellular and molecular mechanisms that enable cancer cells to adapt, survive, and proliferate in a nutrient-limited and hypoxic tumor microenvironment. The cellular and molecular aspects of cancer metabolism involve a shift in energy production pathways, alterations in biosynthetic processes, and the exploitation of metabolic intermediates for the synthesis of macromolecules essential for tumor growth.

This Special Issue will explore the fundamental metabolic adaptations that cancer cells undergo, such as the Warburg effect, the reverse Warburg effect, glutamine addiction, and the pentose phosphate pathway's role in nucleotide synthesis. By focusing on these cellular and molecular aspects, we aim to provide insights into the metabolic pathways that are uniquely altered in cancer and how these changes contribute to the disease's progression, offering potential targets for novel therapeutic interventions.

Both comprehensive reviews and original articles are welcome.

SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation
Centre, The University of
Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
