New Advances in Proteomics in Cancer

Guest Editors:

Dr. Arun Wiita

1. Department of Laboratory Medicine, University of California, San Francisco, CA, USA
2. Department of Bioengineering and Therapeutic Sciences, University of California, San Francisco, CA, USA

Prof. Dr. Sanjeeva Srivastava

Department of Biosciences and Bioengineering, Indian Institute of Technology Bombay Powai, Mumbai 400076, India

Deadline for manuscript submissions:

closed (30 November 2023)

Message from the Guest Editors

Dear Colleagues,

Proteomic technologies have rapidly expanded over the past two decades to address the crucial observation: Biology Happens at the Protein Level. In cancer biology, we have seen proteomic approaches play a foundational role in uncovering potential mechanisms of cancer initiation, metastasis, and treatment. These achievements have come through the systematic and extensive high-throughput analysis of protein expression profiles, protein sequences, structures, variants, PTMs, and functional effects. The goal of this Special Issue is to showcase key advances on applying proteomic approaches to the study of cancer, both related to advances in underlying technologies and key biological discoveries. The topics to be included, but not limited to, are proteomic research with a cancer focus involving the development of high-throughput proteomic methods, proteomics-based biological and clinical findings, small molecule and immunotherapeutic target discovery, therapeutic mechanism of action, cancer immunology, advancements in sample preparation techniques, PTM analysis, single cell analysis, etc. We welcome the submission of both original research articles and reviews.

Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
