Prof. Dr. Jianhua Wang

Children's Hospital, Capital Institute of Pediatrics, Beijing 100020, China

Message from the Collection Editors

As we know, tumor cells have unique metabolism characteristics from normal cells, namely, that they highly rely on aerobic glycolysis to supply energy and a carbon source for survival and growth. This phenomenon is called the Warburg effect, which is associated with radio-resistance and chemo-resistance by generating a chemical reduction milieu (radio-resistance) and extracellular acid microenvironment (immunosuppression), activating DNA damage repair, triggering exosome release (expressing resistance protein), etc. In this case, the metabolism-based therapy will become precision and promising, such as glycolytic inhibitors and other energy inhibitors. However, many elaborate mechanisms related to tumor metabolism changes have yet to be solved.

Therefore, this Topical Collection focuses on the following items:(1) tumor metabolism mechanisms, (2) tumor resistance, (3) and metabolism-based therapy. We welcome the submission of research and review papers from all over the world.

SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation
Centre, The University of
Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
