## Regulation of Fibroblasts and Fibrosis in Cardiovascular Disease

Guest Editor:

**Prof. Dr. Wayne Carver**

Department of Cell Biology and Anatomy, University of South Carolina School of Medicine, Columbia, SC 29209, USA

Deadline for manuscript submissions:

**20 August 2024**

### Message from the Guest Editor

Accumulation of the extracellular matrix results in altered tissue biomechanical properties and can deleteriously impact tissue and organ function. In the cardiovascular system, fibrosis is a predictor of adverse cardiovascular events and is an important driving force in the progression of cardiovascular disease. Fibrosis is a highly complex process that involves a number of cell types, including extracellular matrix-producing cells, as well as immune and inflammatory cells. This process also involves an array of biochemical mediators, including secreted factors and diverse signaling pathways. Recent studies in experimental models and clinical observations indicate that fibrosis may be reversible. This has led to enhanced interest in elucidating the underlying mechanisms of fibrosis and identifying novel therapeutic targets for this process.

This Special Issue aims to provide review and primary research articles focused on the cellular and molecular mechanisms of cardiovascular fibrosis and potential therapeutic approaches for this processes.

## Editors-in-Chief

**Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

**Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
