Molecular Signalings in Hair Regeneration

Guest Editor:

Dr. Soung-Hoon Lee

Department of Anatomy, Yonsei
University College of Medicine,
Seoul, Republic of Korea

Deadline for manuscript
submissions:

30 April 2025

Message from the Guest Editor

Hair regeneration can occur through hair cycle activation, niche environment regulation, and wound-induced hair follicle neogenesis (WIHN) and may be utilized to treat alopecia. Hair regeneration is regulated by multiple signaling pathways, such as the Wnt/ β -catenin, Sonic hedgehog (SHH), and PI3K/Akt signaling pathways. In particular, WIHN was found to be significantly induced by the activation of the Wnt/ β -catenin and SHH pathways. Ultimately, in-depth studies of the molecular signaling pathways involved in hair regeneration may provide new fundamental treatments for alopecia.

This Special Issue will provide a collection of original research and review articles on molecular signaling pathways in hair regeneration that may ultimately contribute to the treatment of alopecia. Potential topics include the role of molecular signaling pathways in hair regeneration; multiple signaling pathways regulating WIHN; the relationship between hair follicle development and regeneration; molecular signaling pathways as therapeutic targets for alopecia; development of new treatments by controlling signaling involved in hair regeneration.

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
