## Viral Vectors Paired with Genome-Editing Tools: Evolving Technologies for the Treatment of Neurodegenerative Diseases and Disorders

Guest Editors:

**Dr. Boris Kantor**

Director of Viral Vector Core,  
Department of Neurobiology,  
Duke University School of  
Medicine, Durham, NC 27710,  
USA

**Prof. Dr. Ornit Chiba-Falek**

Division of Translational Brain  
Sciences, Department of  
Neurology & Pathology, and the  
Center for Genomic and  
Computational Biology, Duke  
University Medical Center,  
Durham, NC 27710, USA

Deadline for manuscript  
submissions:

**closed (31 May 2022)**

### Message from the Guest Editors

Diseases and disorders of the central nervous system (CNS) have historically been among the most difficult to combat using conventional pharmacological strategies. In this chapter, we describe the various tools available for genome editing and summarize in vitro and in vivo preclinical studies of CNS genome editing. We discuss the future progress of these technologies, as well as the current limitations and alternative approaches to overcoming some of their bottlenecks. We will aim here to devote significant attention to viral vectors derived from human immunodeficiency virus type 1 (lentiviral vectors; LVs) and adeno-associated virus (AAVs). The high interest in these viral delivery systems vectors is due to: (i) robust delivery and long-lasting expression; (ii) efficient transduction into postmitotic cells, including the brain; (iii) low immunogenicity and toxicity; and (iv) compatibility with advanced manufacturing techniques. Finally, this chapter will summarize the current therapeutic application and novel approaches of advance genome-editing technology for the prevention and treatment of neurodegenerative diseases (NDDs).

Dr. Boris Kantor

## Editors-in-Chief

### **Dr. Alexander E. Kalyuzhny**

Dental Basic Sciences, University of Minnesota, 308 Harvard St. SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation Centre, The University of Copenhagen, Copenhagen, Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Cell Biology) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
