Message from the Guest Editors

Dear Colleagues,

The precise definition of the biology of a given tumor represents the first step to delineating cancer patient prognosis. Scientists, medical oncologists, surgeons, and pathologists are all actively involved in studies aimed at better stratifying cancer patients with respect to their outcome, and translational efforts dedicated to the development and validation of new biomarkers in tissue specimens and bodily fluids are key for the success of precision medicine in oncology. In this Special Issue, we aim to collect a series of original studies and review articles focused on recent advances in cancer biology, and in particular on how specific techniques and/or the study of specific biomarkers may be instrumental to better stratify prognosis of patients and help to design the best therapeutic option of cancer patients. We are looking forward to your contributions to this Special Issue.

Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
