**Dr. Savina Apolloni**

Department of Biology, Tor Vergata University of Rome, 00133 Rome, Italy

**Dr. Mauro Cozzolino**

Institute of Translational Pharmacology, National Research Council, Rome, Italy

Deadline for manuscript submissions:

**closed (30 August 2021)**

### Message from the Guest Editors

Dear Colleagues,

Neuron loss occurring in neurodegenerative diseases represents just the tip of the iceberg in a series of events where cells, other than neurons, actively contribute to the pathogenic mechanisms, establishing harmful non-cell autonomous processes. In this aspect, amyotrophic lateral sclerosis is paradigmatic of the most common neurodegenerative disorders, since motor neuron demise, the major event characterizing the disease, is accompanied by the activation of astrocytic and microglial cells activation, oligodendroglial pathology, blood brain barrier permeabilization, T cells, macrophages and mast cells infiltration, neuromuscular junction dismantling, muscle alterations and dyslipidemia. Furthermore, the disease can involve the impairment of neurons other than the motor ones, such as those of the frontotemporal lobe.

The aim of this Special Issue is to highlight the role of non-neuronal cells in the onset and progression of different neurodegenerative diseases, such as Parkinson's, Alzheimer's and dementias, Huntington's, spinocerebellar ataxias, spinal muscular atrophy and prion diseases.

## Editors-in-Chief

### **Prof. Dr. Alexander E. Kalyuzhny**

Neuroscience, UMN Twin Cities,  
6-145 Jackson Hall, 321 Church St  
SE, Minneapolis, MN 55455, USA

### **Prof. Dr. Cord Brakebusch**

Biotech Research & Innovation  
Centre, The University of  
Copenhagen, Copenhagen,  
Denmark

## Message from the Editorial Board

*Cells* has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPlus / SciFinder](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
