Message from the Collection Editors

Activation of cellular senescence-associated pathways affect biosynthesis of secreted small extracellular vesicles (EV) and contribute to modifying concentration, size, cargo, and function of plasma EV in aging subjects. Senescent-like EV are functionally active and might induce cellular senescence in “normal” cells, thus contributing to the accumulation of senescent cells, a mechanism that plays a major role in the development and progression of age-related pathologies. Despite this important function, how EV change in response to aging and the underlying mechanisms that contribute to these changes are poorly understood.

The Special Issue will evaluate manuscripts addressing original research as well as review papers trying to elucidate the role of aging cells in regulating EV content, including RNAs, proteins and lipids and the active role of such component in surrounding cells. Editors will consider studies based on in vitro and in vivo models of senescence as well as approaches envisioning senolytic agents (natural or synthetic) to revert the aging process.

Editors-in-Chief

Prof. Dr. Alexander E. Kalyuzhny

Neuroscience, UMN Twin Cities,
6-145 Jackson Hall, 321 Church St
SE, Minneapolis, MN 55455, USA

Prof. Dr. Cord Brakebusch

Biotech Research & Innovation
Centre, The University of
Copenhagen, Copenhagen,
Denmark

Message from the Editorial Board

Cells has become a solid international scientific journal that is now indexed on SCIE and in other databases. We have successfully introduced a special issues format so that these issues serve as mini-forums in specific areas of cell science. *Cells* encourages researchers to suggest new special issues, serve as special issues editors, and volunteer to be reviewers. Our main focus will remain on cell anatomy and physiology, the structure and function of organelles, cell adhesion and motility, and the regulation of intracellular signaling, growth, differentiation, and aging. We are open to both original research papers and reviews.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [CAPus / SciFinder](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Cell Biology*) / CiteScore - Q1 (General Biochemistry, Genetics and Molecular Biology)
