### Message from the Guest Editors

Dear Colleagues,

Existing monolithic ceramic materials exhibit severe brittleness. Overcoming the brittle characteristics of ceramics has remained one of the challenges in the ceramic industry. One of the potential approaches is to tailor the microstructure of ceramics at nanometer level. This can be done by reinforcing these materials with existing carbon nanomaterials such as carbon nanotubes (CNTs) and graphene nanoplatelets (GNPs). These promising carbon nanomaterials has shown exceptional mechanical behavior and outstanding multifunctional features, which are currently being investigated for variety of engineering applications. Different grades of CNTs (single-walled, multi-walled) can be used in brittle ceramics to improve their toughness, strength, and electrical and thermal conductivities. Similarly, GNPs possess impressive thermal, mechanical, and electrical properties. This topic will help researchers to summarize the latest development in utilization of these materials for advanced engineering applications in these different industrial sectors.

## Message from the Editor-in-Chief

*Ceramics* (ISSN 2571-6131), an international, open access journal, provides an advanced forum for ceramics science and engineering. Research articles, reviews and other contents are released on the internet immediately after acceptance. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We are committed to drive *Ceramics* to a position in which it is recognized for its high-quality, cutting-edge research and scientific influence, and strongly encourage and invite your participation and manuscripts. Your contribution should lead to the development of technical ceramics with better performances and to improve our quality of life.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus**, **ESCI (Web of Science)**, and **other databases**.

**Journal Rank:** JCR - Q1 (Materials Science, Ceramics) / CiteScore - Q2 (*Materials Science (miscellaneous)*)
